All prices are estimated street prices

(1) One m2 of fully printed area.

(2) Number of m2 that can be printed with one set of 4 inks. Small figure ("min") is for the color most used, the first to be replaced.

(3) "Ink price per ml" considers the price of the cartridges (cartridge capacity is 80ml for Black and 29ml for the rest of the colors).

Formula used: Ink price / ml = cartridge price / cartridge capacity.
